# NGX BreakAway Coupling

**TODO®**

## APPLICATIONS

Designed to be installed on the same line as a TODO-MATIC hose unit, the NGX Break-Away can handle the same demanding applications found on both land and offshore. The NGX is commonly used in the chemical and LPG sectors, though can be used to **improve safety** wherever hazardous or valuable products are being transferred.

## HOW IT WORKS

When subjected to excessive forces the NGX's break pins shear, causing the pistons to spring forward and shut each side of the connection. **This not only keeps operators safe, but also minimises product losses and costly downtime.**

## FEATURES & BENEFITS

Available in 2"-4" sizes

Market-leading flow rate and low pressure drop

Encapsulated shear bolts

Operates independently of shut off safety systems

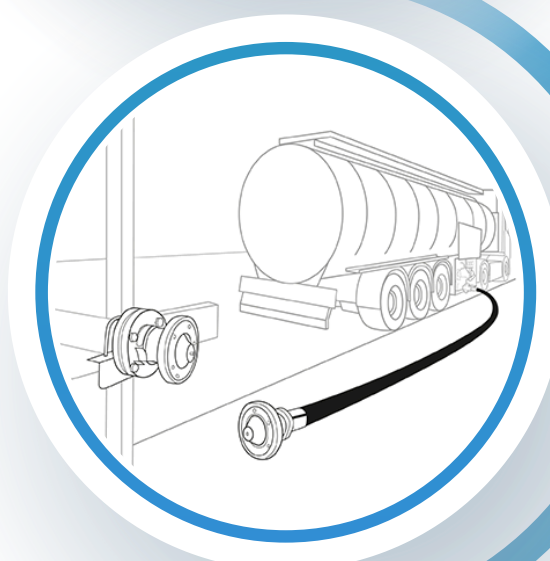

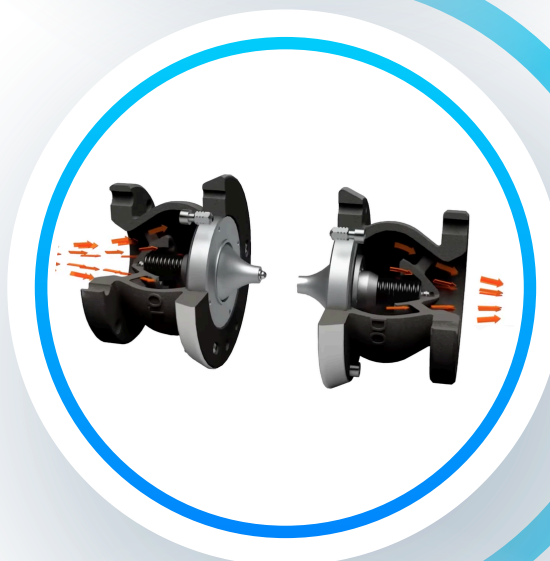

Release function works at any angle of force

Easy to reset on site

**Available as Industrial or Marine Breakaway**

## BUILD & MATERIALS

The NGX BreakAway coupling can be made with aluminium or 316L stainless steel and fitted with an almost endless choice of O-ring grades.
